

Frontend Developer for Colourbox

Colourbox is looking for a software developer who is interested in both how the applications look and also in making them work correctly under the surface. You will be a part of a strong developer team working out of our headquarters in Odense, Denmark. You will work on Colourbox, a stock image site and Skyfish, a media handling platform that helps users organise share and edit images. Our customers include major public and private clients, the Danish Ministry of Justice, a large part of the municipalities in Denmark, and major corporations such as DONG and DSB. We're experiencing high growth and need you to help create optimal conditions for continued future growth. The platform you help develop will create a fantastic user experience for our users and also convert new visitors into paying customers.

Job Functions

Our projects can vary from small tweaks on the site to large projects consisting of several functionality changes, or the implementation of new products. You will work with the implementation of the design, but also with needed changes to the underlying back-end code base that makes it all work.

Your Qualifications

You are a developer who knows your way around web technologies such as HTML5, Javascript (newest frameworks and vanilla), PHP, CSS, SQL and friends. You can implement the design, so the result looks as it was designed, all while making sure it's good solid code that performs well when 50 people are using it per second. You also know how to develop code that is reusable and modular. Seeing copy/paste code will automatically make you start refactoring the code. Our services run on our AWS infrastructure, consisting of Linux servers that run open source software such as NGINX, MySQL and Elasticsearch, and custom built services written in PHP, Python, Go and C.

What we offer

A full-time position, working from our office in Odense. You will be offered a competitive wage with the ability to be influential while enjoying professional freedom with responsibility. We offer flexible working hours, a pleasant office environment, a pension plan, a lunch arrangement, and a supportive work climate with ambitious and energetic international colleagues. You will become part of an expanding, successful international business.

Interested?

If this is you, we want to hear from you! Send your CV and Cover Letter to Recruitment Lead, Aleksandra Domanowska at ad@coderesourcing.com
