

# Java Developer \_ Maximus (TDC)

Copenhagen/Aarhus

## Start-up like environment with cool new technologies

Where consumer-facing companies have become increasingly more customer centric, business-to-business companies are still lagging far behind.

TDC wants to change this and have started an innovation garage called Maximus. The goal is that the customer has the best possible experience – no matter which channel they are contacting us through. In there, the work is done in cross-functional teams with business, IT, marketing, design and sales sitting together. Corporate reporting lines have been removed and the team has been given full mandate to reinvent the customer experience. There, you don't get leading roles because you have been there for a long time, you get leading roles by taking initiative and showing the way. Cross-skilled engineers are encouraged to show the direction, not just following along and solving tasks within their single area of expertise.

Microservices will help detach the user journey from the old mainframe in the back. In Maximus, it is all about changing TDC's user experience from process-oriented to customer-oriented – Join Maximus efforts by enabling customer journeys like they should be.

Maximus is basically a company within a company with a young start-up like culture that you will be part of shaping from day 1.

## Inspired Java developer, excited to do microservices

Maximus is looking for microservice developers, who are excited to take a leading role in ensuring that TDC delivers the best customer experience in Denmark. If you are a strong java developer and potentially know your way around Docker, Kubernetes or OpenShift, then we would love to talk to you.

## Application process

Please apply by sending your CV to Christian Payne, Digital Recruiter at Code Resourcing (email: [cp@coderesourcing.com](mailto:cp@coderesourcing.com)), who is handling the recruitment process on behalf of Maximus. The process will consist of a first interview with us at Code Resourcing, after which we will arrange the interview process with Maximus.

## Short video intro to Maximus
